

Type of company: SME

What are the core activities of your company (mark with a cross):

Supply of resources	Production	Harvest	Downstream processing	Use of algae (products)
			X	

## 1. Company profile

Describe:

- Activities of your company: Eco Treasures specializes in the extraction of valuable molecules from, primarily, natural feedstock. However all extraction technologies are used, we focus primarily on green solvents. Eco Treasures has a pilot installation for supercritical CO2 extraction.
- Number of employees: 4
- Turnover: 250.000 euro/y
- ...

## 2. Algae based activities

Eco Treasures wants to participate actively on extraction technology of valuable molecules out of algae. It can make this technology then available for the customer but is also interested in transferring this knowledge in an industrial context under contract processing.

## 3. Market supply

Extraction technology: classical solvent of water extraction.  
Supercritical CO2 extraction
